processes the inputted account data, a memory unit which stores the processed result performed by said processing unit and a display unit which displays the account data stored in said memory unit as a household account book, wherein said memory unit stores a rule for converting the inputted account data of different formats into a predetermined unified format, said processing unit includes a data analysis unit which converts the inputted account data of different formats into the predetermined unified format based on the rule stored in the memory unit, said display unit displays the respective inputted account data after conversion and the account data after conversion entered in said memory unit as the household account book and said processing unit further includes an overlap judgment unit which judges an overlap between the respective inputted account data after conversion displayed on said display unit and the account data after conversion entered in said memory unit as the household account book, and stores the account data into said memory unit based on the result of the overlap judgment.

8. (Three Times Amended) A household account book management system in which a plurality of terminals are connected via a network and at least one terminal includes a household account book management apparatus which displays account data inputted via the network as a household account book, wherein said household account book management apparatus includes plural input units which input a variety of account data of different formats from the plurality of terminals, a processing unit which processes the inputted account data, a memory unit which stores the processed result performed by said processing unit and a display unit which displays the account data stored in said memory unit as a household account

book, wherein said memory unit stores a rule for converting the inputted account data of different formats into a predetermined unified format, said processing unit includes a data analysis unit which converts the inputted account data of different formats into the predetermined unified format based on the rule stored in the memory unit, said display unit displays the respective inputted account data after conversion and the account data after conversion entered in said memory unit as the household account book and said processing unit further includes an overlap judgment unit which judges an overlap between the respective inputted account data after conversion displayed on said display unit and the account data after conversion entered in said memory unit as the household account book, and stores the account data into said memory unit based on the result of the overlap judgment.

Please add new claim 10 as follows:

--10. A household account book management apparatus according to claim
3, wherein said display unit displays money movement between the plural account

data sources.--
